Dry use.	No need to use water; quick & easy application.	Less preparation & clean up time.

**Application Guide:** Use with:  
Total Compounding Foam (2 pk)  
Advanced G Mop Back Plate with Interface Pad

TOT-CF  
AGM-BPIP

# Total Advanced Liquid Compound

## Directions for Use

For best results by machine follow these recommended steps:

- ⌘ Knead the new Total Compounding Foam between your fingers to soften it before use. This will significantly improve its performance.
- ⌘ For best results, always prime new foams with compound prior to use.
- ⌘ Apply the Total compound to the surface sparingly and spread with the Total Compounding Foam - too much product is unnecessary and can make the application greasy.
- ⌘ Begin compounding with a running speed of 1500-1800rpm.
- ⌘ Using the Total Compounding Foam flat on the panel, buff until all marks have been removed.
- ⌘ The structure of the Total Compounding Foam is different to that of the white G Mop Compounding Foam and it is designed to be used flat. Using the foam flat also helps to prevent swirl marks.
- ⌘ Continue compounding until the desired finish is achieved.
- ⌘ Finally, wipe carefully with a Farécla Finishing Cloth.
