

# The Envirobase High Performance System

ENVIROBASE<sup>®</sup> HIGH PERFORMANCE

Envirobase High Performance builds on the heritage of Envirobase to deliver a substantial improvement in performance.

#### Maximise your Bodyshop Productivity

Envirobase High Performance features a new set of aluminiums and high strength, high opacity coloured toners, giving excellent opacity and application allowing bodyshops to maximise their productivity.

#### Market Leading Waterborne Colour

Envirobase High Performance Toners use cutting edge pigments that are fully aligned to current and future original equipment manufacturers colour trends, thus giving bodyshops unprecedented colour accuracy.

Supported by the new Envirobase High Performance Variant Deck, produced using Envirobase High Performance paint, the system provides market leading colour performance and reflects PPG's position as a world leader in Automotive Finishes.

#### Envirobase High Performance Benefits

- Builds on the existing strengths of Envirobase
- Improved productivity for the bodyshop through faster process time
- Excellent opacity leads to reduced material usage
- State of the art Envirobase High Performance Variant Deck that is fully aligned with the paint system
- All new colour matches to provide industry leading colour performance
- Expanded colour capability to meet future colour trends
- Excellent aluminium control to ensure a perfect finish

# The Envirobase High Performance System

**ENVIROBASE**® HIGH PERFORMANCE

## Envirobase High Performance

Envirobase High Performance – a unique waterborne basecoat system that allows you to meet legislative demands, whilst maximising productivity and profitability.

**Envirobase High Performance is the fast, easy to use waterborne basecoat that provides a perfect colour match every time.**

Envirobase High Performance provides a step change improvement to Envirobase, a technology which is already proven and well established in the market.

Building on the existing strengths of Envirobase, Envirobase High Performance provides additional performance benefits including:

- Maximising your bodyshop productivity
- Market leading waterborne colour offer

As a non-stir system, Envirobase High Performance Toners can simply be shaken before use; saving time normally spent ensuring any settled pigment is thoroughly incorporated whilst still guaranteeing continuous colour accuracy and providing an excellent finish. Ease of fade out gives an invisible colour blend easily, every time.

We believe Envirobase High Performance will maintain the market leading position of this technology for years to come and reflects PPG's position as a world leader in Automotive Finishes.

**Envirobase High Performance: the waterborne basecoat system built around your needs.**

## The Complete Compliant Solution

Envirobase High Performance has been specifically designed to work seamlessly with other PPG compliant ranges such as Deltron Progress UHS Direct Gloss, Engine Bay and our range of Clearcoats and Primers. Used in isolation each PPG range is exceptional, and when used together as part of your compliant bodyshop strategy they offer unbeatable colour matching capability and ease of use.

## Deltron Progress UHS Direct Gloss

Whether you are an existing UHS Direct Gloss user or you are making the move to a compliant solvent system for the first time, the Deltron Progress UHS DG range supports you every step of the way.

This new product range will give you outstanding opacity. This means fewer coats are needed, saving you time and money together with material savings of up to 25% over conventional MS systems. This new system also features a genuine 10 minute bake option, giving you maximum process efficiency.

The introduction of a brand new lead free compact mixing scheme reduces your stockholding requirements and it is easier to use. For example, the improved gloss hold out gives a high quality repair whilst reducing the need to polish.

The colour matching accuracy has been improved of the tinters and ensured that they align to current and future OEM trends.

And finally, the Deltron Progress UHS DG range integrates seamlessly with Envirobase High Performance, our market leading waterborne basecoat so that you can be confident of providing a robust solution to every customer requirement.

- Works alongside Envirobase High Performance to provide a highly competitive system
- Compact hardener and thinner range
- OEM approved system

## Engine Bay

The unique new Engine Bay repair system from PPG gives you faster process times over conventional repair methods, whilst still accurately matching the original OEM colour.

The process centres around an Engine Bay Converter - D8011, that quickly and easily transforms the Deltron Progress UHS DG Scheme into an Engine Bay System.

The Engine Bay system is fast and simple to use and can be re-coated with Envirobase High Performance and Deltron Progress UHS DG solid colours in 10 minutes if required. Use it alongside the PPG Greymatics system – the superior solution for external only repairs.

## Clearcoats

PPG has a flexible range of premium clearcoats to meet every requirement. All are easy to use and are fully aligned to OEM requirements.

- D8141: Deltron Progress UHS Clearcoat

D8141 is a compliant clearcoat that combines flexibility and ease of use. Like all PPG products, it gives you an excellent final appearance that your customers will love. Whatever size or type of bodyshop you operate, D8141 will give you improved matting capability and good flow from the gun.

- D8109: UHS Clearcoat

A premium, compliant, durable clearcoat with excellent performance in good bodyshop conditions. D8109 is our warranty clearcoat that has OEM approval.

- D8135: UHS Rapid Clear

D8135 is a rapid cure clearcoat specifically designed for use on small repairs

- D8105: CeramiClear

CeramiClear is a specialist scratch resistant Clearcoat which has been specifically designed to match OE scratch resistant finishes.

- D8122: CeramiClear 8122

CeramiClear 8122 is optimised to achieve a balance of ease of use and scratch resistance. It performs to a higher level of scratch resistance than standard market clearcoats, without compromising on fadeout and polishing characteristics.

## Primers

To ensure the right finish, you need the right Primer. That's why PPG has a flexible range of compliant primers that are easy to use and are fully aligned to the OEM market.

- D8010/D8017 Rapid Greymatic Primers

Rapid Greymatic is our lead premium surfacer. It's easy to use and easy to sand and gives a good topcoat appearance.

- D8077/D8078 2K HS WOW Primer

Premium WOW primer providing easy application & flow with fast process times.

- D8018/D8019/D8024 Greymatic Primers

Greymatic is our warranty surfacer primer that has OEM approval.

- D8067/D8069 Waterborne Epoxy Primers

This waterborne epoxy primer uses Greymatic technology and has multi-substrate capability.

- D831 Universal Etch Primer

A chromate free etch primer that has OEM approval.
